SKILLS

- HTML, Css, JavaScript, Python, TypeScript, React, Git, Node, NextJS, Express, MongoDB, SQL
- Operating Systems, Backend, Frontend, AWS, Microservices,

WORK EXPERIENCE

ShoreStone Insurance: *Full-Stack Engineer*   August 2024 – April 2025

- Developed a comprehensive rating system, enabling precise risk assessment and streamlined policy pricing. Designed to enhance accuracy, efficiency, and decision-making in the underwriting process.
- Built a scalable client management system capable of handling thousands of clients, optimizing workflow automation, improving data accuracy, and ensuring seamless client interactions.
- Enhanced the customer service portal, enabling clients to manage policies, submit claims, and track statuses in real time. Designed for seamless user experience, improving accessibility and reducing support workload.

PROJECTS

E-commerce app   Link: https://eco-front1.vercel.app

- Designed and developed a dynamic full-stack eCommerce platform using **JavaScript** and **Next.js**, featuring **Google Authentication** for secure user login and **Stripe** integration for seamless payment processing. Utilized **MongoDB** for database storage to efficiently manage product data and user information. Implemented a comprehensive admin dashboard, enabling product management with real-time updates and inventory control. Optimized performance, security, and scalability to enhance user experience and streamline business operations.

Youtube Clone   Link: https://youtube-nu-six.vercel.app

- Created a high-performance **YouTube clone** using **JavaScript** and **React**, featuring a sleek, modern UI with an intuitive user experience. Integrated a **third-party API** to fetch and display dynamic video content, ensuring seamless playback and real-time updates. Focused on clean design, responsiveness, and efficient state management to deliver a polished and engaging video streaming platform.

AirBnb Clone   Link: (Currently Being created)

- Engineered a full-stack Airbnb clone using **JavaScript, React, Tailwind CSS,** and **Express**, delivering a seamless property rental experience with a modern, responsive UI. Developed dynamic booking functionality, user authentication, and real-time property listings to enhance usability. Built a robust backend with **Express**, ensuring efficient data handling and API performance. Focused on scalability, security, and an intuitive user experience to replicate a top-tier rental platform.

Wordle app   Link: https://wordle-nu-eight.vercel.app

- I built a Wordle app using **JavaScript** and **React**, focusing on replicating the core gameplay of the original game while maintaining a clean and responsive user interface. The app generates a random five-letter word each day, and users have six attempts to guess it. I used React state to manage guesses, track keyboard input, and provide real-time feedback with colored tiles indicating correct, misplaced, or incorrect letters.

EDUCATION

Self-Taught   November 2022 – April 2025

- HarvardCS50
- Codecademy: Full-Stack Engineering Course.
- FreeCodeCamp: JavaScript, Python, and React Courses.
